RGU ID-2016278

1. Introduction

Topic - Movie Recommendation Website

The topic we chose was a Movie Recommendation Website, because at this time, online entertainment is the only escape people have and it seems practical to make a movie recommendation site than other sites according to our opinion. The name we selected was MovieMe, which was a sample name at first glance but later on it became permanent due to the fact that it fit in extremely well along with the logo we developed. Our goal was to include features into the site so that the user does not have a hard time navigating through the website. It is a truly simple website with easy to use functions.

Members

1. [Sandun De Silva](#) - 2016276 - Student Role 2
2. Akarshani Ramanayake- 2016691 - Student Role 3
3. [Imandi Karunaratne](#) - 2016278 - Student Role 1

- Student 4 wasn't completed because we had only 3 individuals in our team.

The features of the website will be stressed below in the Technical Discussions.....

2. Research on existing systems

Some of the systems that already exist are,

Netflix, HBO Max, Hulu, Crackle, Amazon Prime Video, etc...

Before starting our coursework, we visited many existing websites in order to come up with an idea for the UI and all the functionalities used in the website

In detail, the first website that came into our minds was Netflix, because it conveniently had the same functions as our website, therefore we got some inspiration from there. Below I have given short descriptions of each existing System;

Netflix : The company's main business is a subscription-based video service that allows users to watch movies and TV shows online, including those made within their company. Netflix has been a major player in the production of in-house films.

HBO Max - HBO Max is an American subscription video on demand streaming service which was founded by AT&T via Time warner Direct franchise of WarnerMedia.

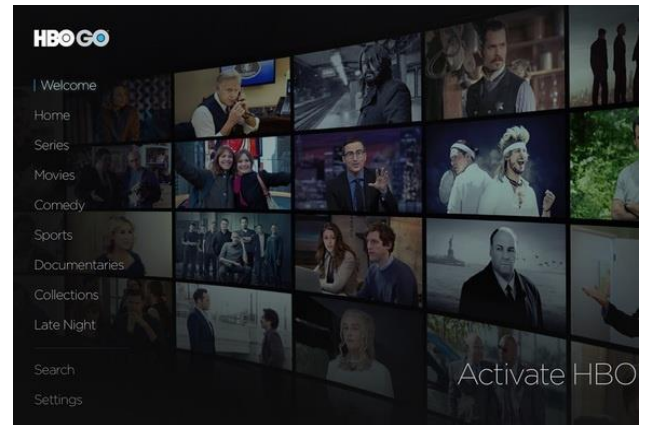

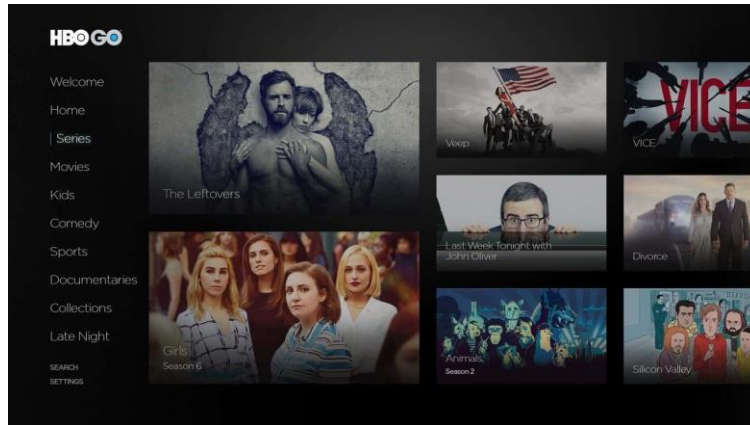

Those two are the main types of streaming services. Some Screenshots of the UI's of all the existing systems that we gathered for research are attached below.

Below given is the main landing page of Netflix along with some other pages.

We got our inspiration from all of these webpages, and we pulled off an amazing website with a combination of all these sites.....

HBO GO

HULU

Crackle

(Next
page)

Features Of Existing Movie Websites.

We will only note down the most prominent websites with their features.

Netflix :

Netflix subscribers can watch an infinite selection of movies, documentaries, and television shows from a vast library.

Customers do not have to wait for DVDs to come in the mail or for complete downloads before viewing because the material is streamed over the internet.

Netflix Customers get exclusive access to Netflix Original content.

HBO Max:

Anywhere you are, you can watch all HBO channels live.

Service is accessible at any time, from any place, and on any smartphone.

Get uncut HBO Originals at the same time as the US, plus on-demand access to award-winning dramas and Hollywood blockbusters.

3. Technical Discussion

Imandi Karunaratne -Student 1

- The main tasks which were assigned to me were :
 - Creating a presentation page
 - Making the Sign up form
 - Making a Gallery Page
 - Logo and Editors Page Link (Student 1)
 - Making the Editors Page (Student 1)
- For the **presentation page** I went for a black and cyan theme so it goes along with the movie me theme which we have incorporated for this website .

- For the background of the presentation page I went for a cool movie theatre background . the reason I chose that is because I needed to make it feel like to the user who is viewing the website that he is going to watch a movie
- The presentation page was designed in such a way that after a 5 seconds timeout , the main page which has the movies will be displayed there on .
- I used the below java script in order to make that happen

```
<script>
  document.addEventListener("DOMContentLoaded", () => {
    setTimeout(() => {
      this.location.href = "MainPage.html";
    }, 5000);
  });
</script>
```

- For the heading I used an external font family in order to get a an attractive heading to my title “WELCOME TO MovieME”
- The below external font family was used from given website URL :

```
# Presentation.css > 
1 @import url('https://fonts.google.com/specimen/Poppins?selection.family=Poppins&sidebar.open=true&preview.text_type=custom');
2 body{
3   display: flex;
4 }
5
```

- I also used key frames and an animation to emphasis the text and provide a shadow
- The below code is how I implemented the text shadow and glowing effect:

- Css code for Text shadow to enhance the texts :

```
@keyframes glowing {
  0% {text-shadow:0 0 .3em, 0 0 .3em;}
  25% {text-shadow:0 0 .3em, 0 0 .6em;}
  50% {text-shadow:0 0 .6em, 0 0 .3em;}
  75%{text-shadow: 0 0 .6em, 0 0 .6em;}
  100%{text-shadow:0 0 .3em, 0 0 .3em;}
}
@-webkit-keyframes glowing {
  0% {text-shadow:0 0 .3em, 0 0 .3em;}
  25% {text-shadow:0 0 .3em, 0 0 .6em;}
  50% {text-shadow:0 0 .6em, 0 0 .3em;}
  75%{text-shadow: 0 0 .6em, 0 0 .6em;}
  100%{text-shadow:0 0 .3em, 0 0 .3em;}
}
```

- Css code for glowing effect :

```
.name{color: #03e9f4;animation: glowing 2s infinite;}
```

- Presentation Page :

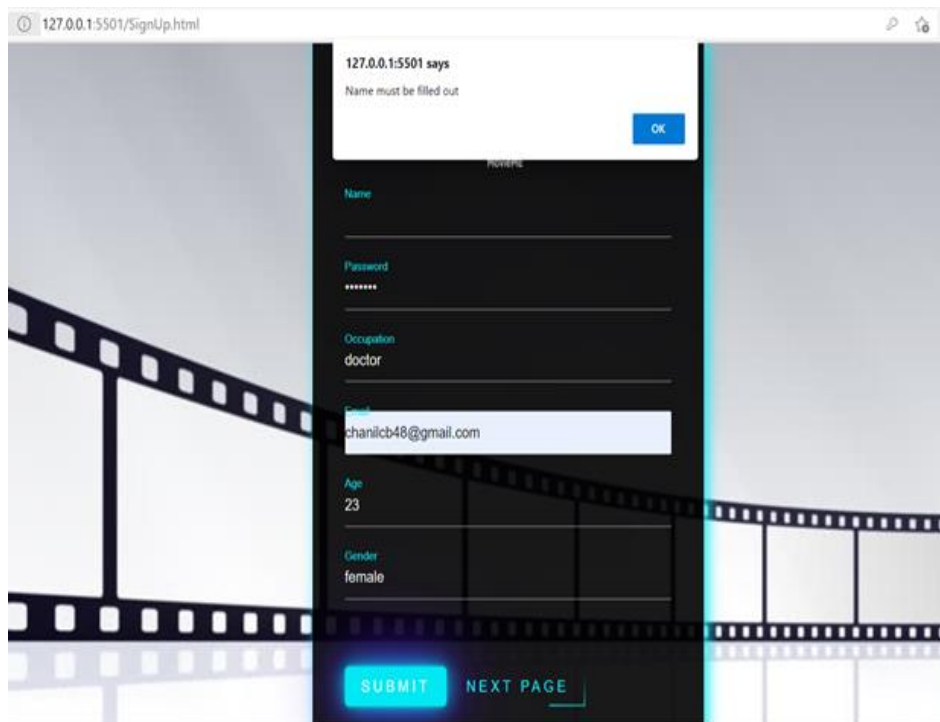

- For the **sign up form** I wanted to highlight the form well so I chose a very light background (white background with a movie strip) . This background not only gives a more subtle look but also blends in well with the original theme due to the addition of the movie strip .
- For the sign up page I have included the 5 compulsory criteria and in addition to that I also have added a password as well
- And to make sure that the user enters a valid input I hve used java script to check in the user inputs for each criteria and to display an appropriate alert message that suits each invalid input

- For example if the user has not entered his or her name the below code will run and an alert message will be displayed .

Code for name validation

```
var x = document.getElementById("fname").value;  
if (x == "" || x == null) {  
    alert("Name must be filled out");  
    return false;  
}
```

Alert Message if name has not been put:

- Like the above same way I have implemented for each user criteria a validation using java script
- The below code shows the complete validation code which was done by using js :

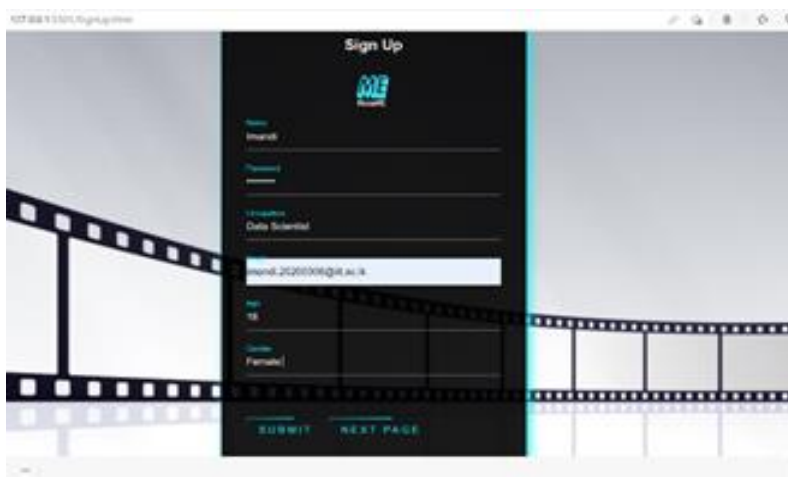

```

63 <script>
64
65 function displayform() {
66     var x = document.getElementById("fname").value;
67     if (x == "" || x == null) {
68         alert("Name must be filled out");
69         return false;
70     }
71
72     var y = document.getElementById("password").value;
73     if (y == "" || y == null){
74         alert("Password cannot be null or should be greater than 8 characters")
75         return false;
76     }
77     var x=document.myform.email.value;
78     var atposition=x.indexOf("@");
79     var dotposition=x.lastIndexOf(".");
80     if (atposition<1 || dotposition<atposition+2 || dotposition+2>=x.length){
81         alert("Please enter a valid e-mail address ")
82         return false;
83     }
84     var x = document.getElementById("age").value;
85     if (isNaN(x) || x < 1 || x > 100) {
86         alert("Please enter a valid age")
87         return false;
88     }
89
90     var i = document.getElementById("gender").value;
91     if (i == "male" || i == "female" || i == "Male" || i == "Female" || i == "MALE" || i == "FEMALE") {
92         return true;
93     }
94     alert("should be either male or female");
95     return false;
96
97 }
98
99 /script

```

- If all the details are entered correctly by the user the below message will be displayed as shown below (ss):

Correct Inputs :

A screenshot of a web browser displaying a movie recommendation application. The address bar shows the URL "http://localhost:8080/movies.html". The page has a dark theme with a black background and teal accents. A film strip graphic runs diagonally across the screen. On the left, there are two vertical panels: one showing a grid of movie posters and another showing a list of movies. The main area contains three sections: "Price" with radio button options for budget ranges (100-250 INR, 250-500 INR, 500-1000 INR), "Brand" with radio button options for studios (Avengers, Warner Bros, Universal Pictures, 20th Century Fox), and "Genres" with radio button options for genres (Romance, Horror, Comedy, Action). At the bottom, there is a teal "SUBMIT" button.

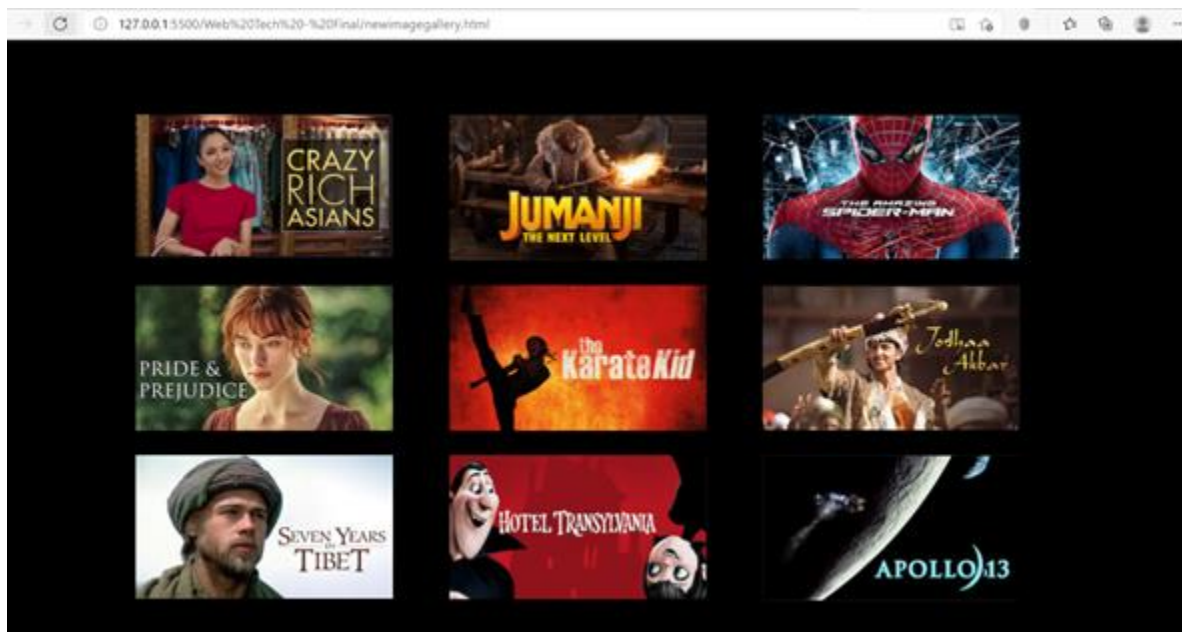

Alert Message code and ss on website :

The screenshot shows a web application interface with a dark theme. At the top, a white notification box displays the message: "127.0.0.1:5501 says: Dear imandi.20200306@it.ac.lk, Thank you for using Movie4ME. The recommended results will be shown in a while." Below this, the login form is visible with the following fields:

- Username:** imandi
- Password:** masked with asterisks
- Occupation:** Data Scientist
- Email:** imandi.20200306@it.ac.lk
- Age:** 18
- Gender:** Female

 At the bottom of the form, there are two buttons: "SUBMIT" and "NEXT PAGE". The background of the application features a film strip graphic.

- The gallery page , My Gallery comprises of three main things
 - 9 thumbnail images
 - An image slideshow
 - Separate area with a movie card and movie description .
- Initially I decided to only have 6 movie cards with their description but I found that it looked blank and it didn't have anything to make it exciting to look at
- So I changed the overlook of the gallery page and added a separate area where there is 9 thumbnails as shown below:

- When the user moves the mouse cursor on top of an image it will slightly enlarge as shown below (look at the amazing spiderman thumbnail) :

- I used the below code snippet for enlarging the image when the user hovers over the movie thumbnail :

```
.movie-card:hover{
  transform: scale(1.3);
  z-index: 2;
  cursor: pointer; //thumbnail hover
}
```

- I also added an image slideshow to make the gallery page look more exciting .
- The below code is how I implemented my image slideshow

```

<div class="slideshow">
  <div class="slideshow-item">
    
    <!-- <div class="slideshow-item-text">

  </div> -->
  </div>
  <div class="slideshow-item">
    
    <!-- <div class="slideshow-item-text">

  </div> -->
  </div>
  <div class="slideshow-item">
    
    <!-- <div class="slideshow-item-text">

  </div> -->
  </div>
  <div class="slideshow-item">
    
    <!-- <div class="slideshow-item-text">

  </div> -->
  </div>
  <div class="slideshow-item">
    
    <!-- <div class="slideshow-item-text">

  </div> -->
  </div>
  <div class="slideshow-item">
    
    <!-- <div class="slideshow-item-text">

  </div> -->
  </div>
</div>

```

- For the image slideshow the animation effect (zooming effect and fading) was made using the below code snippets :

Zoom effect code snippet:

```

@keyframes zoom{
  100%{
    transform: scale(1.3);
  }
}

```

Fading Effect code snippet:

```
@keyframes fadeIn{  
  0%{  
    opacity: 0;  
  }  
  
  100%{  
    opacity: 1;  
  }  
}
```

- Next for each thumbnail image, I made a movie card and a description as shown below :

- Each movie image was taken from the internet and using an image tag I added each to the gallery page

```
<a href="#scroll1"></a>v>
```

- Also I added a hover effect on the text so that when the user hovers over the movie description it enlarges
- The hover effect on the movie description was implemented using below code snippet :

```
.movie-block:hover{  
  transform: scale(1.3);  
  z-index: 2;  
  cursor: pointer;  
}  
//movie description hover
```

- The below code is the html code for a few from the 9 movie cards with description which I implemented :

```
<div class="movies">  
  <!--movie image starts-->  
  <div class="movie crazyrichasians ">  
    <div class="movie-card">  
      <a href="#scroll1"></a>  
    </div>  
  </div>  
  <!--movie image end-->  
  
  <!--movie image starts-->  
  <div class="movie Jumanjnextlevel ">  
    <div class="movie-card">  
      <a href="#scroll2"></a>  
    </div>  
  </div>  
  <!--movie image end-->  
  
  <!--movie image starts-->  
  <div class="movie amazingspiderman ">  
    <div class="movie-card">  
      <a href="#scroll3"></a>  
    </div>  
  </div>  
  <!--movie image end-->
```

- Next on my tasks was for me to add the logo at each of my pages and the link to the editors page
- To add the link to my editors page I used the below code snippet:

```
</script>
<a href="imandi.html">Click here to go to editors page</a>
</body>
```

- To add the logo in all the pages (Sign up form preferences part, gallery page) I used below code snippets:

In sign up and preferences page:

```
<link rel="icon" href="pics/My (4).png" type="image/png" >
```

In Gallery page :

```

<ul id="menu">
```

- Finally I had to make **my editor page**. The editors page has a small description about myself , my roles as Student 1 and also a small image of myself.

Imandi Karunaratne

I am a current student of IIT following Artificial Intelligence & Data Science offered by Robot Gordon University. I love to learn Machine learning and innovate new things using AI technologies. MovieME is a web site created by Imandi, Akashani and me. It is a user friendly website where customers can watch movies online and download any movie they want. We only use HTML, CSS & Vanilla JavaScript to develop this site.

Project Role (Student One)

- Presentation Page
- SignUp Page
- Gallery Page
- Preferences page
- Editors Page
- Footer for the main page

Sandun De Silva - Student 2 ;

- The main task I was given was to develop the main webpage for the entire website, which was a quite challenging task due because I was in head of setting the theme for the entire website.
- To make sure that consistency is maintained, I had to stick to the same theme as the main page when it came to the other pages as well.

- The theme decided was black and blue. This automatically gave the website a dark mode, which is rather mandatory in 2020.
- To make the webpage easy to navigate I set the navigation panel to be at the top right corner like any simple website, this way the user won't be confused whatsoever. Here are some code snippets for the html and the styling css for the navbar;

```
<nav id="navbar">
    <div class="navb">
        
        <ul id="menu">
            <li><a
href="MainPage.html">Home</a></li> <!--
linking main page -->
            <li><a
href="loadingG.html">Gallery</a></li>
<!-- linking gallery page -->
            <li><a
href="#one">Quiz</a></li> <!-- when
user clicks on quiz he will be redirect
to quiz part -->
```

```
        <li><a
href="loading.html">Shop</a></li> <!--
linking about us page -->

        <li><a
href="loadingA.html">About Us</a></li>
<!-- linking about us page -->

        <li><a
href="loadingS.html">Login</a></li> <!--
- linking sign up page -->

    </ul>

</div>

</nav>
```

```

#navbar ul {
  display: inline-block;
  float: right;
  list-style: none;
  margin-top: 30px;
  text-align: right;
  margin-right: -180px;
  font-size: 20px;
  transition: transform 0.5s ease-out;
  -webkit-transition: transform 0.5s ease-out;
}

@media(max-width: 640px) {
  #navbar ul {
    display: none;
  }
}

@media(orientation: landscape) {
  #navbar ul {
    display: inline-block;
  }
}

#navbar li {
  display: inline-block;
}

```

Screenshots attached below....On hover animation is shown here as well

- I also managed to include our website logo along with navbar and added a onclick url for it to redirect to when clicked(Back to Main Page). Shown Below along with the code

```

```

Picture Shown below

- After coming up with a certain navbar design what I had to tackle next was completing the mainpage. I had to make sure to keep the black and blue theme used in the navbar throughout the page.
- In the CW, it was mentioned to insert a video into the mainpage, therefore I went with a movie compilation (Avengers) As soon as the user enters the page, he/she is greeted with a trailer video (it will be the currently trending movie, I used a sample video here) I did not attach code snippets or screenshots of this functionality because it is quite simple and easy to understand.
- I decided to add a search bar with some additional animations.

```
<div>
    <input type="text"
placeholder="Search . . .">
</div>
```

```
.search-box div:after {  
  background: white;  
  content: "";  
  height: 20px;  
  width: 4px;  
  position: absolute;  
  top: 40px;  
  right: 2px;  
  transform: rotate(135deg);}
```

Unlimited movies, TV shows and more.

Ready to watch?.

Search ...

- The display after the search bar opens....
- Next for the trending movies and the new arrivals, I managed to use a simple, minimalistic flip and zoom in animation where, when the user

hovers over the image, the image will flip over and a description of the movie will pop up.

This is the outer image along with the inner description, code below

Outer Image

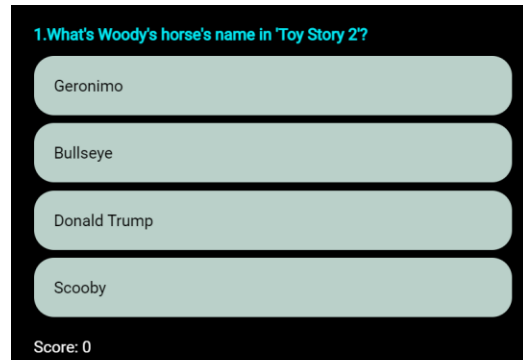

Inner Description

```
<div class="square">
  <div class="image">
    
  </div>
  <div class="quote">
    <h3>AVENGERS-
ENDGAME</h3>
    <p>IMDb 7.3/10</p>
  </div>
```

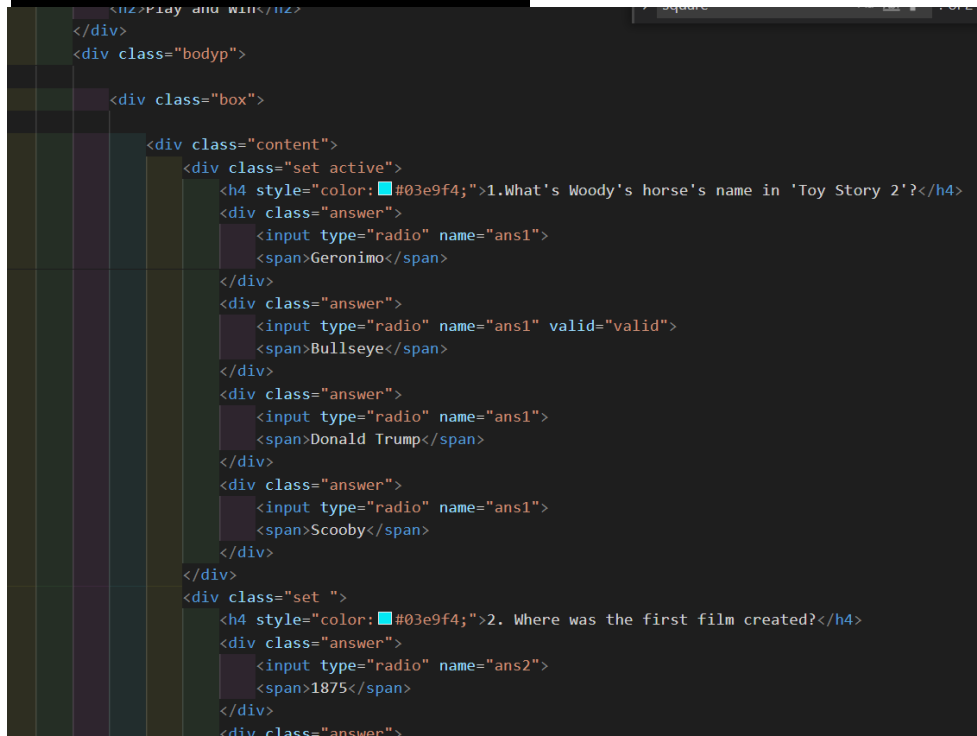

```
.square {  
    position: relative;  
    width: 200px;  
    perspective: 1000px;  
    transition: all 0.5s ease-in-out  
0.5s;  
}*/continues in the next page/*  
.square:hover {  
    transform: scale(1.1);  
    box-shadow: 1px 2px 10px 5px solid  
black  
}
```

Next I thought of having the quiz on the same page as the main page. I did not put it in a separate page because then the website will be easier to use with less categories. Part of the code is attached below along with the screenshot of the quiz. Because the entire code will take too much space, it wasn't attached.

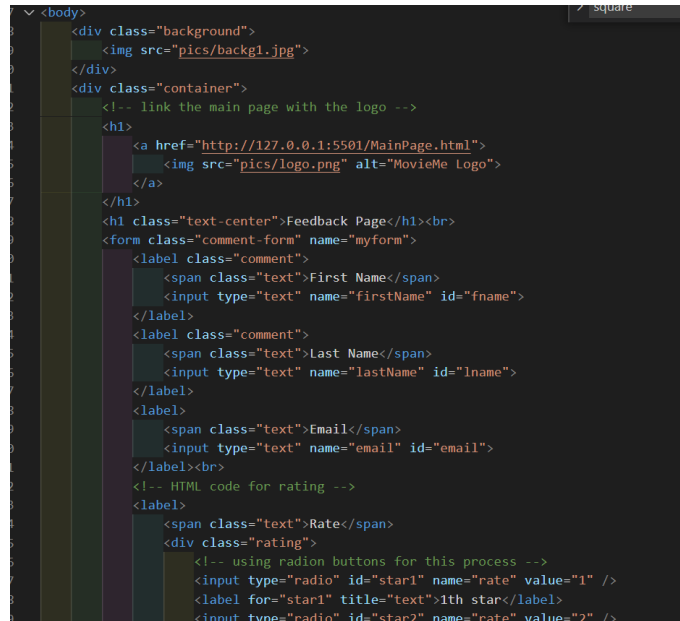

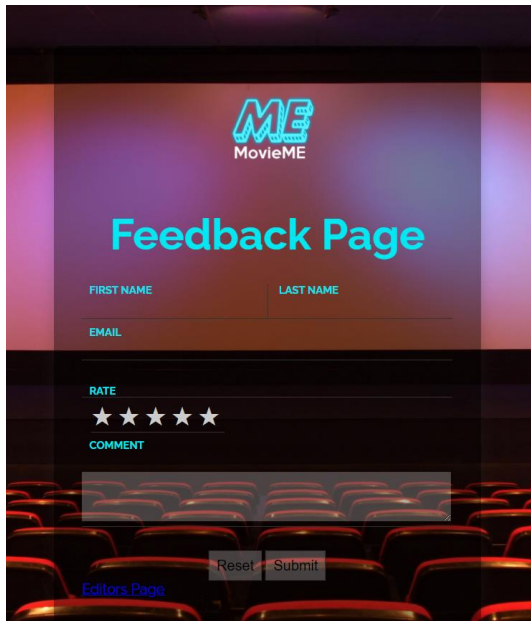

I decided to make a Graphical quiz instead of a prompt box quiz for additional marks.

Screenshot of the quiz.....

- Also implemented a preloader for each page, so that the user will not experience any lags or loading files or images. I linked it to every webpage using additional javascript.

- I also made a Contact Us form like stated in the

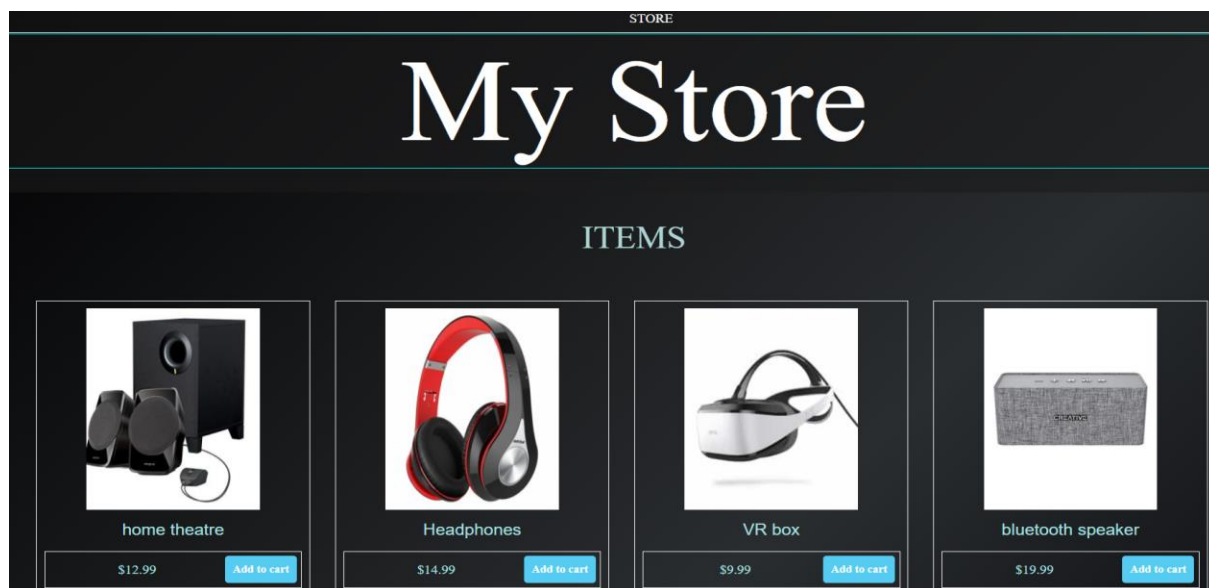

tasks. Screenshots shown below.

Akarshani Ramanayake - Student 3

- The main tasks that I received were to complete a functional product purchase page and to make a about us page to introduce our team within the website.
- Other than these two main tasks there were some additional tasks such as adding javascript to increase/decrease the font size of a page using a button. What seemed to be challenging

was making the Product Page. Because it had a lot of javascript in it.

- However with the help of the javascript lectures and some self-studying, I managed to complete the product page just in time for submission;
- Screenshot of my product page, along with some code snippets given here.

This
is the
html.

```
<!-- this is the upper part of the store page -->
<header class="header">
  <!-- nav bar -->
  <nav class="nav">
    <ul>
      <li><a href="store.html">STORE</a></li>
    </ul>
  </nav>
  <!-- main head -->
  <div class="name">
    <h1>My Store</h1>
  </div>
</header>

<!-- this is the main parts of the store page -->
<section class="container">
<!-- this is the first part -->
  <h2 class="content">ITEMS</h2>

  <!-- this part is about all items -->

  <!-- first row -->
  <div class="products">
    <!-- first item -->
    <div class="single-product">
      <!-- inserting the picture -->
      
      <span class="store-item-title">home theatre</span>
      <!-- next 4 lines are about price and button -->
      <div class="store-item-details">
        <span class="store-item-price">$12.99</span>
```

Javascript is given below

```

if (document.readyState == 'loading') {
    document.addEventListener('DOMContentLoaded', ready)
} else {
    ready()
}

function ready() {
    var removeCartItemButtons = document.getElementsByClassName('btn-danger')
    for (var i = 0; i < removeCartItemButtons.length; i++) {
        var button = removeCartItemButtons[i]
        button.addEventListener('click', removeCartItem)
    }

    var quantityInputs = document.getElementsByClassName('cart-quantity-input')
    for (var i = 0; i < quantityInputs.length; i++) {
        var input = quantityInputs[i]
        input.addEventListener('change', quantityChanged)
    }

    var addToCartButtons = document.getElementsByClassName('store-item-button')
    for (var i = 0; i < addToCartButtons.length; i++) {
        var button = addToCartButtons[i]
        button.addEventListener('click', addToCartClicked)
    }

    document.getElementsByClassName('btn-purchase')[0].addEventListener('click', purchaseClicked)
}

// remove items from the cart

function removeCartItem(event) {
    var buttonClicked = event.target
    buttonClicked.parentElement.parentElement.remove()
    updateCartTotal()
}

```

Javascript Code Attached Below

The store is fully functional, along with the use of a shopping cart and a list of the added items along with the total price of everything. I used javascript to implement these functions.

I used css and html only for the about us page, using some buttons and simple texts. I stored the individual

user information in a separate page. (Editors pages) I included the links to access those pages as well.

I attached the entire html code for the about us page. A small css section is attached along with a screenshot of the page as well.

```
body{
  margin: 0;
  padding: 0;
  color: white;
  position: fixed;
  font-family: 'Poppins', sans-serif;
}

.box{
  background: rgba(0,0,0,0.6);
  width:350px;
  height:400px;
  position:absolute;
  margin-top: -350px;
  margin-left:250px;
  transform: translate(-50%,-50%)
}

.image img{
  height: 70px;
  width:70px;
  border-radius: 50px;
  position:absolute;
  top:0%;
  left:50%;
  transform: translate(-50%, -50%)
}

.box h2{
  text-align: center;
  margin-top: 50px;
}
```

```
<head>

    <title>About Us</title>

    <link rel="stylesheet"
href="about.css">

    <link rel="icon" href="pics/My
(4).png" type="image/png" >

</head>

<body>

    <div class="backimage">

    </div>

    <div class="box">

        <h2>Imandi Karunaratne</h2>

        <div class="image">

4. Discussion of UX/UI principles/Applications/Justifications

4.1 Navigation Techniques

- When it comes to navigation, clearly it is one of the most important parts of the website. Both design and functionality each are important when it comes to the Navbar.
- To make sure that the website would be easy to navigate, and to make sure the navigation is fluid and minimal, we used the following techniques;
 1. Standard Horizontal Navigation Menu
 2. Animated Navigation Menu
- The navbar we made was a simple horizontal menu, this is really easy to use and it is easily understandable for any new user. When the user hovers over any item, there is an animation that occurs below the text for the user to understand which field he is hovering over. In order to maintain consistency we used the same navbar in every page.

- Attached below are screenshots of the navbar and some code snippets.

```
<nav id="navbar">
<li><a
href="MainPage.html">Home</a></li> <!--
linking main page -->
```

- Sample code snippet of the nav tag opening and the first element of the menu.

4.2 Color balance/selection/consistency

- When developing our website we thought of following the latest trend in 2021. Which is using a dark theme... Almost 80% of websites depend on Polymorphism or Glass Morphism, we thought outside the box and decided to go with a dark theme along with a touch of blue neon color. For each page we went with this theme once again to maintain consistency. We also maintained a simple minimal design. Even the trailer video we used has a blue theme (Avengers theme color is blue).

- Even the logo that we designed has a blue theme along with a movie reel....

Some code snippets of the logo and the colour styling attached below

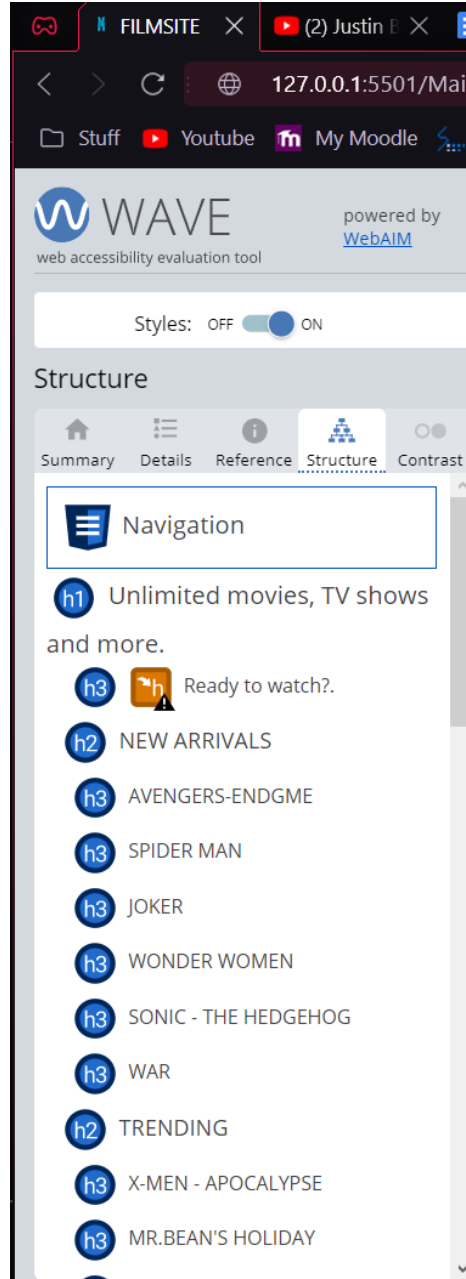

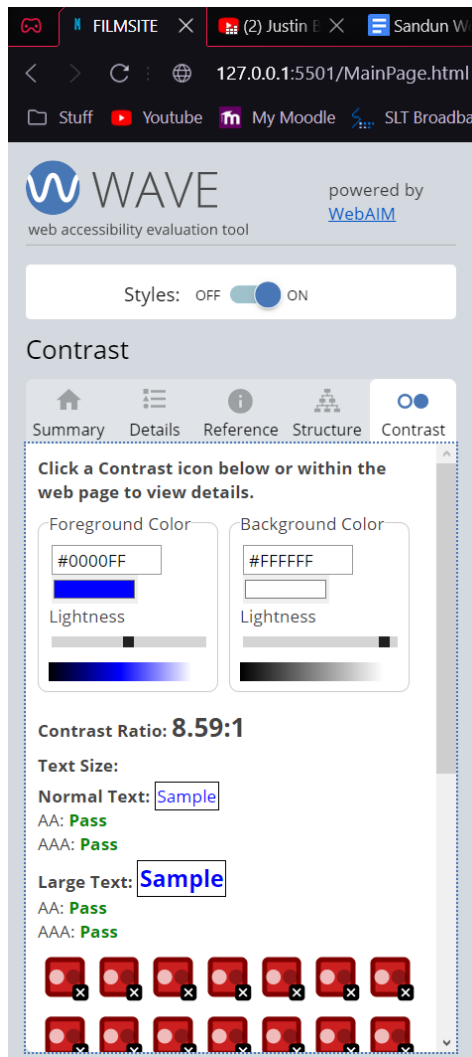

Custom Designed Logo. Along with the body background color

```
body {  
  background: rgb(0, 0, 0);
```

4.3 Color Contrast Test

- Without guessing whether the colours of our website are easily to look at and whether the

accessibility level is high, we used some online tools to get the rating of the website.

Colour Contrast Check

Date created: January 11, 2005
Date last modified: January 11, 2015

Foreground Colour:	Background Colour:	Results																
<div>#1947FF</div> <div>Red: <input type="text"/></div> <div>Green: <input type="text"/></div> <div>Blue: <input type="text"/></div> <div>Hue (°): <input type="text"/></div> <div>Saturation (%): <input type="text"/></div> <div>Value (%): <input type="text"/></div>	<div>000000</div> <div>Red: <input type="text"/></div> <div>Green: <input type="text"/></div> <div>Blue: <input type="text"/></div> <div>Hue (°): <input type="text"/></div> <div>Saturation (%): <input type="text"/></div> <div>Value (%): <input type="text"/></div>	<div>This is example text. Some of it bolded. <i>Some of it italicized.</i></div> <table><tr><td>Brightness Difference: (>= 125)</td><td>78.222</td></tr><tr><td>Colour Difference: (>= 500)</td><td>351</td></tr><tr><td>Are colours compliant?</td><td>NO</td></tr><tr><td>Contrast Ratio</td><td>3.386</td></tr><tr><td>WCAG 2 AA Compliant</td><td>NO</td></tr><tr><td>WCAG 2 AA Compliant (18pt+)</td><td>YES</td></tr><tr><td>WCAG 2 AAA Compliant</td><td>NO</td></tr><tr><td>WCAG 2 AAA Compliant (18pt+)</td><td>NO</td></tr></table>	Brightness Difference: (>= 125)	78.222	Colour Difference: (>= 500)	351	Are colours compliant?	NO	Contrast Ratio	3.386	WCAG 2 AA Compliant	NO	WCAG 2 AA Compliant (18pt+)	YES	WCAG 2 AAA Compliant	NO	WCAG 2 AAA Compliant (18pt+)	NO
Brightness Difference: (>= 125)	78.222																	
Colour Difference: (>= 500)	351																	
Are colours compliant?	NO																	
Contrast Ratio	3.386																	
WCAG 2 AA Compliant	NO																	
WCAG 2 AA Compliant (18pt+)	YES																	
WCAG 2 AAA Compliant	NO																	
WCAG 2 AAA Compliant (18pt+)	NO																	

4.4 Typography / consistency

- For the default font for all of our pages, we decided to use Roboto. The reason we went with an identical font type for all our web pages was to maintain consistency among all the webpages. Another reason we went with roboto was because it is a font that we import from Google Fonts, which is a library which is always up and almost never gives us bugs. Roboto is a very easy to read and attractive font type. Roboto is used among a vast number of websites in 2021. It has become extremely popular... We included the font family code below.

```
@import
url('https://fonts.googleapis.com/css2?
family=Roboto:wght@300;400&display=swap
');

font-family: 'Roboto', sans-serif;
```

4.5 Accessibility

- Our webpage is accessible for any person, including; people with slow internet connections, people with impaired hearing (each movie contains subtitles)

5. Self-Reflection

Imandi Karunaratne (Student 1)

I was requested by my team to do the tasks assigned to Student 1 .

Student 1 Tasks were to construct the Sign Up Form and Preferences, The Presentation page ,the Gallery Page and finally to link all the tasks to the editors page.

Through this Coursework , I learnt to work efficiently with my team and meet all deadlines in a very timely manner.

I would like to add that the lecture slides which were offered by the module leader for the module was very helpful and I learned a lot .I additionally I also had to do some research on my own to further build up my knowledge so that I can fulfill the goals and objectives of my tasks to my fullest capability.

However, due to the current global pandemic ,communicating with my team was made online and was a obstacle for us because this was a group coursework and each member of our team was assigned a different task.

Due to this , assembling all our codes together to make the final website was quite challenging since all the codes have to be well linked with each other.

But with the help of online platforms such as Google Meets , WhatsApp Messaging and Zoom meetings we were able to communicate via online and be able to work together through these difficult times.

It would have given me immense happiness if my country would have been in a better place and hopefully if we could return back to normal , we can work on our next group coursework more smoothly and efficiently.

Sandun De Silva(Student 2)

When it came to our Web Technology Coursework. We had to face a lot of issues, however we pushed through our problems extremely well. Because we were given this Assignment right when campus closed, we did not meet the team daily.

Usually the group Assignment would be done by arranging many physical meetups and study sessions but due to the current situation in the country, we did not have many physical meetups, we maintained a github repository in order to make our workflow more productive. Our work was made more efficient using Google Meets. These two technologies played a huge role in our assignment.

But I have to admit that our website came to a level which none of us had in mind. It was on a whole new level. I had an excellent team, we maintained excellent communication and we had an amazing level of collaboration. At first sight, the tasks that I had received seemed very challenging. Developing a main page, contact form, quiz was kind of overwhelming... However after listening to lectures and self studying required areas, the task seemed easier.

I managed to go over and beyond and completed a Graphical Interface instead of a regular prompt box quiz. I also added Favicons to make the website more colourful and creative. I also implemented many Javascript functions to make our website a great success! We did not face any problems, only when it came to the designing part all three of us had three different views, but we implemented all our ideas and made an amazing website at the end of the day. We had countless sleepless nights to make this website a success. We learnt how to collaborate with a team and it gave us a sneak peak of working with other team members, which I think will be an advantage for our internship in the coming years. Overall it was a great experience and a good time, throughout this coursework.

Akarshani Ramanayake (Student 3)

Our webtech coursework was a very challenging task, but in my opinion it is very rewarding as well because it gave us a sneak peak of what working in a team of developers is like.

We came up with many contradicting ideas but, we learnt to compromise and come up with conclusions everyone agrees on. We made maximum use of some online communicating tools such as Google Meets, GitHub to maintain our codes in a well organized manner. The regular meetings and organized workload was the real reason for our success.

Sandun led the team in an extraordinary manner. He took all the weight and divided the tasks in an easy to follow manner. If it wasn't for my teammates this website would have never

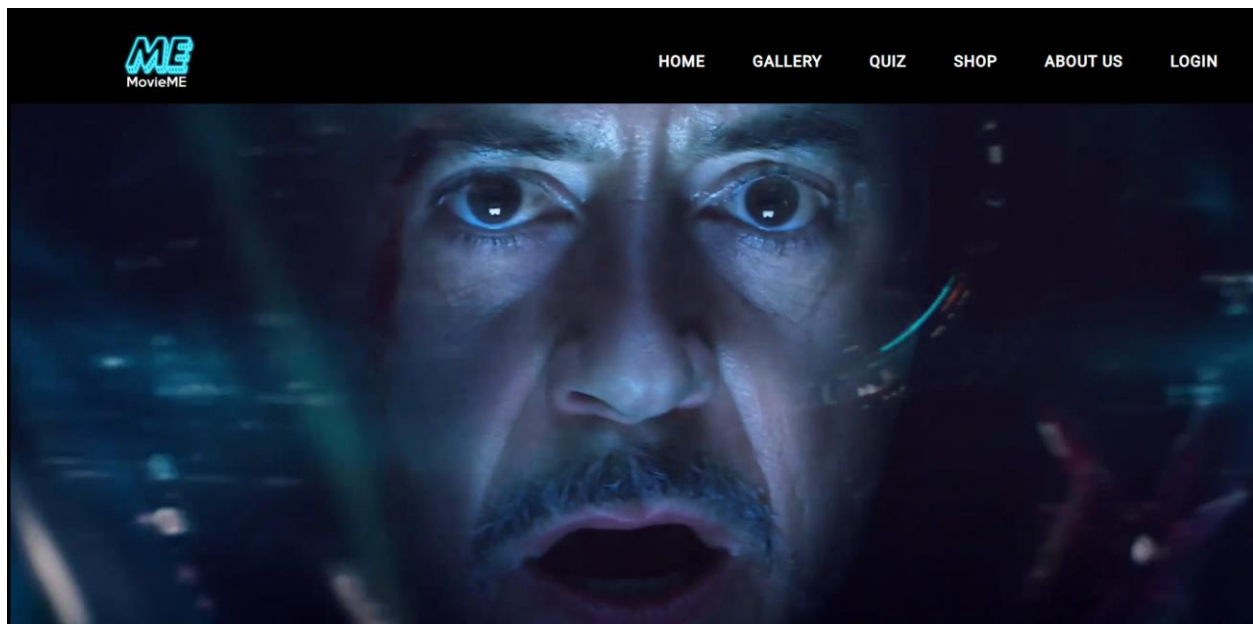

come up to such a level. We decided not to make UI Designs before starting to code because if we did, we would keep trying to duplicate the UI Design, and we would be stuck on several stages and time was not on our side....even though we started one week after the coursework was released. I managed to somehow pull off a successful product page with all the necessary javascript and a well crafted about us page with great styling as well.
